ABOUT ME

Results-driven Test Engineer with a Bachelor's degree in IT Management and a strong foundation in software testing methodologies. Currently engaged with D'Ieteren on behalf of CTG/Cegeka since November 2022, I have completed a comprehensive Test Automation class, gaining expertise in Ranorex, Selenium, Playwright, and API Testing. Successfully completing CTG's Junior Test Engineer training program in October 2022, I acquired in-depth knowledge of testing across various software development life cycles, including test planning, design, execution, and defect management. My training emphasized expert-driven, value- and context-based testing approaches, equipping me with a versatile toolkit to excel in software testing roles. I possess hands-on experience with defining test strategies, building critical and independent testing attitudes, and working with CI/CD pipelines, Unit Testing, and IoT environments. With previous experience in sales and software development within the (Multi) Media industry, I bring a flexible, motivated, and enthusiastic mindset. Adept at working independently or collaboratively, I am committed to delivering quality results and continuous improvement.

WORK EXPERIENCE

D'IETEREN
AUTOMOTIVE / CTG
BRUSSEL
Nov 2022 - Present

Test Engineer

- As a test engineer, my main responsibility is to design and execute tests for an application used by car dealers in Belgium.
- This involves creating test plans and test cases, carrying out regression and functional tests, designing and executing tests for integrations, working closely with developers and stakeholders, reporting and tracking issues, collaborating on resolving issues, and providing feedback on application quality.

CTG
Sep 2022 - Oct 2022

Test Engineer

- Junior test engineer training program aimed at acquiring all required testing skills to perform as a (junior) test professional in any testing project.
- Focused on plan and value driven software testing approaches, defining test strategies, test design, test execution, defect management, and building critical and independent attitude.
- Included an internship handling all aspects of a test project, applying knowledge, soft skills like communication, diplomacy, critical thinking, and assertiveness.

AVANADE BELGIUM
Feb 2022 - Apr 2022

Full Stack Developer (Intern)

- Participated in developing a solution based on IoT technologies, developed unit and integration tests, deployed the solution using CI/CD, and collaborated within the community for expertise.

AUTO KARREVELD
Nov 2017 - Sep 2019

Versatile seller

- Selling products related to cars, managing stock, helping customers, organizing shelves.

RGIS BELGIUM
Jan 2016 - Sep 2017

Inventorist Specialist

- Setting up inventories in department stores, organizing shelves.
